

The Learning Assistant is to help individual student or learner or group of students and learners to understand some difficult articles written by academics that are not aimed to first learner of the discipline.

Usually, academic papers or scholar papers written by different disciplines. They use different styles and format that are new to any high school graduates or the first and the second years colleges or university students.

The app is aimed to use language cognitive skill of large language models developed in the market to retrieve the relevant information or knowledge in the document uploaded. This speeds up the process or helps those with difficulties of language skill to understand the insights and findings of the paper.

Obviously, each learner or student needs to search for the right or related papers from the internet trust-worthy sources: such as e-libraries or university research centers or government bodies. Papers downloaded from these sources have verified findings for any students able to learn and acquire the peer-review findings in the academic circle. This is part of learning process.

The app accepts single doc or a group of docs. It is recommended to upload one doc every time. It is easy for anyone to cross-check and verify whether the response of the AI to the enquiry is the accuracy and appropriate.

The app provides two functions:

1. Summaries any docs (can more than one) in less 200 words
2. Response to any enquiry about the content of the doc, one can have trace ones' enquiries and responses of the AI.

Hints:

1. Have a sketch what you want from the documents or articles or books you like the AI read for you.
2. Have a quick look on the documents you upload, particular the section head, chapter titles and the preface, those are the sources of direction help you to shape your enquiries.
3. If your aim is to write a paper or a thesis, be careful to cross-check whether the AI directly copy the content as the response. My recommendation is to use other LLM app to write the response. Remember to quote the reference in the footnote that each student and learner should uphold this ethical principle
